

Weekly Progress Report - Week 04

Name: Shivani

Domain: Core Java Programming

Date of Submission: 15-07-2026

Week Ending: 04

I. Overview

During Week 04, my primary objective was to strengthen my understanding of fund transfer and transaction management while contributing to the Banking Information System project. I spent time learning theoretical concepts and implementing them through practical coding exercises. Every day I practiced Java programs to improve my programming logic, coding standards, and debugging skills. I also reviewed mentor instructions, project documentation, and previous examples to understand how enterprise-level Java applications are structured. The knowledge gained this week helped me understand how Core Java concepts are applied in real-world software development.

II. Achievements

- Successfully completed the planned learning objectives for the week.
- Practiced more than 20 Java programs related to the weekly topic.
- Improved understanding of object-oriented programming principles including abstraction, encapsulation, inheritance, and polymorphism wherever applicable.
- Worked on the Banking Information System project by designing reusable classes and methods.
- Improved coding style by using meaningful variable names, comments, and modular functions.
- Learned debugging techniques and resolved logical as well as syntax errors independently.
- Participated in discussions with mentors and clarified doubts regarding project implementation.
- Maintained daily coding practice to strengthen Java fundamentals.

III. Challenges

Initially I faced difficulty understanding certain programming concepts and integrating multiple Java classes into a single project. Debugging runtime exceptions and validating user inputs also required additional effort. I resolved these challenges by reading Oracle documentation, referring to Java tutorials, practicing similar problems repeatedly, and seeking guidance from mentors. These activities significantly improved my confidence in solving programming problems.

IV. Learning Resources

During this week I utilized multiple learning resources including Oracle Java Documentation, Bro Code Java Course, JavaTpoint, GeeksforGeeks, HackerRank practice problems, YouTube tutorials, and mentor guidance. I also revised classroom notes and experimented with sample programs to gain practical experience.

V. Next Week's Goals

My goal for the upcoming week is to continue implementing the remaining Banking Information System modules, improve exception handling, enhance code quality, perform testing, and maintain proper project documentation. I also plan to solve additional Java programming problems to further improve logical thinking and coding efficiency.

VI. Additional Comments

This week was highly productive and provided valuable practical exposure to Core Java programming. The internship experience helped me connect theoretical concepts with real application development. I became more confident in writing structured programs, identifying bugs,

optimizing code, and following software development best practices. The continuous learning process motivated me to improve my technical skills and prepare for advanced Java concepts in the following weeks.
